Applicant's amendments and remarks filed 7/31/03 have been received and reviewed.

Claims 1-6 and 9-11 are pending in this application.

## Claim Rejections - 35 USC § 112

Claim 9 is again rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is still not known which disorder or condition can be effected or facilitated by activating ORL1-receptor and which disorder or condition is not. One skilled in the art cannot say for sure whether a given disorder or condition can be effected or facilitated by activating ORL1-receptor or not. Applicants point to a J. Med. Chem. article which is speculative at best and which indicates that much research is needed.

Claims 9 and 10 are again rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling as a method of treating pain, does not reasonably provide enablement for treating all of the other disorders or conditions recited in the claims. The basis of this rejection is the same as given in the previous office actions and is incorporated herein fully by reference. Applicants again argue that no sufficient reason has been given and point to the article in the Journal of Medicinal Chemistry. However, Applicants claims go beyond what the authors of the article state.

Regarding claim 9, is extensive experimentation required on the part of a potential infringer to determine if his use of Applicants' activator falls within the limitations of applicants' claim? *In re Kirk and Petrow*, 153 USPQ 48 (CCPA 1967). As the Supreme Court said in *Brenner v. Manson*, 148 USPQ at 696: "a patent is not a hunting license. It is not a reward for

Page 3

the search, but compensation for its successful conclusion." As U.S. Court of Customs and Patent Appeals stated In re Diedrich 138 USPQ at 130, quoting with approval from the decision of the board: "We do not believe that it was the intention of the statutes to require the Patent Office, the courts, or the public to play the sort of guessing game that might be involved if an applicant could satisfy the requirements of the statutes by indicating the usefulness of a claimed compound in terms of possible use so general as to be meaningless and then, after his research or that of his competitors has definitely ascertained an actual use for the compound, adducing evidence intended to show that a particular specific use would have been obvious to men skilled in the particular art to which this use relates."

## **Double Patenting**

Claims 1-6 and 9-11 are rejected under the judicially created doctrine of obviousnesstype double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,172,067. Although the conflicting claims are not identical, they are not patentably distinct from each other because the two sets of claims overlap substantially. Applicants are required to maintain a clear line of demarcation between the applications should Applicants insist that there is no overlap. See MPEP § 822. The reference teaches a generic group of compounds which embraces applicants' claimed compounds (See claim 1 and the definitions of the variables of compounds of formula (I)). The claims differ from the reference by reciting specific species and a more limited genus than the reference. However, it would have been obvious to one having ordinary skill in the art at the time of the invention to select any of the species of the genus taught by the reference, including those instantly claimed, because the skilled chemist would have the reasonable expectation that any of the species of the genus would have similar properties and,

Art Unit: 1624

1846 (Fed. Cir. 1989).

thus, the same use as taught for the genus as a whole. One of ordinary skill in the art would have been motivated to select the claimed compounds from the genus in the reference since such compounds would have been suggested by the reference as a whole. It has been held that a prior art disclosed genus of useful compounds is sufficient to render prima facie obvious a species falling within a genus. In re Susi, 440 F.2d 442, 169 USPQ 423, 425 (CCPA 1971), followed by the Federal Circuit in Merck & Co. v. Biocraft Laboratories, 847 F.2d 804, 10 USPQ 2d 1843,

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bruck Kifle, Ph.D. whose telephone number is 703-305-4484. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mukund J. Shah can be reached on 703-308-4716. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1235.
